

**Subject: NEW PRODUCT INTRODUCTION  
 BV206 Track**

The BV206 is a tracked articulated, all-terrain carrier developed by Hägglunds. Over its production life (1983 – 2003) more than 12,000 units were delivered to various militaries around the world. In recent years many of these versatile machines have found their way into the civilian aftermarket. To complement our existing NATO-approved track Camoplast is pleased to introduce a new product for this important aftermarket segment.

Designed with the civilian user in mind this new track is fully compatible with the original undercarriage. In addition it has several features which make it an ideal replacement track.

- Unique tread design for reduced vibration and superior traction.
- Zig-zag pattern reduces lateral slippage when running on sloped terrain.
- Additional tread material for better wear and longer life.
- Smooth edges and tapered design on steel guides to prevent carcass gouging.
- Design allows replacement of a single track without risk of transmission damage.

SPECIFICATIONS			
Part Number	Width	Length	Weight
BVA 620x90.6x64	620 mm	5800 mm	215 kg

There are several imitators on the market today – don't be fooled. They can't compare to the quality and life you'll get from a Camoplast track. Stock located in Kansas, USA and Daejeon, Korea. Pricing to follow separately.
